FOR IMMEDIATE RELEASE

TriSquare's eXRS Highlighted at the 2010 CES in Las Vegas

(**TriSquare Electronics Corporation, Kansas City, MO**) TriSquare will be promoting their advanced technology **eXRS** digital two-way radios at the **2010 International CES** in Las Vegas. The show runs January 7th through the 10th and showcases the newest and most advanced electronics products from around the world. Please plan to visit TriSquare Electronics Corporation at booth number **15029B** in Central Hall at the **Las Vegas Convention Center**.

eXRS (eXtreme Radio Service) is an advanced two-way radio system that uses proprietary Frequency Hopping Spread Spectrum (FHSS) technology to provide private and secure communications. Interference from nearby users is a thing of the past, and one no longer has to worry about others eavesdropping on conversations, making **eXRS** Radios perfect for family or business use.

TriSquare's flagship **TSX300** offers top of the line features and performance that will appeal to families, businesses and outdoorsmen alike. With 10 billion available channels, interference and jammed reception are no longer a concern. Easy to use **SMS text messaging** with vibrator alert allows for simple and silent communication, while **VOX** mode allows for hands free operation. The built in 10-channel **NOAA weather** receiver will always keep users a step ahead of the weather, and the backlit keypad and dot matrix display are visible at day or night. **eXRS** Radios are available in metallic charcoal grey and in Realtree Advantage Timber HD camouflage.

The lower cost **TSX100** gives users the **eXRS** benefits of secure and interference free communications without the advanced features of the TSX300. The TSX100 has 1000 channels and is compatible with the TSX300 on those channels. Both radios feature a

phone book style contact lists for storing other users' information, as well as extended battery life, call signaling, and VOX operation.

Unlike most other two-way radios, **eXRS** radios are license free and there are absolutely no airtime charges or fees required. With no restrictions, **eXRS** radios may be used by people of any age for personal and business purposes, yet still have the same range capabilities of other quality UHF hand-held radios that require an expensive license to operate. According to Worthey, "The eXRS system is the pinnacle of two-way radio technology and is perfect for businesses, families with kids or anyone else interested in maintaining private and secure communications. And it's all available with no additional licensing or fees."

TriSquare has been a leader in the design and manufacturing of two-way radios since its inception in 1999. Offices are located in Kansas City, MO and Hong Kong.

To learn more about TriSquare **eXRS** radios and accessories, visit TriSquare's website at <http://www.trisquare.us> or contact Sales at (816) 505-3575 or email to sales@trisquare.us.
