FOR IMMEDIATE RELEASE

TriSquare's eXRS is Attracting New Customers with *Realtree Camo*

(TriSquare Electronics Corporation, Kansas City, MO) TriSquare is announcing the arrival of *Realtree Advantage Timber HD* camouflage to its line of revolutionary eXRS hand-held two-way radios. With hands-free and silent operation, eXRS is gaining the attention of outdoorsmen, but not the wildlife, making them the perfect addition to any recreational arsenal.

eXRS (eXtreme Radio Service) is an advanced two-way radio system that uses proprietary Frequency Hopping Spread Spectrum (FHSS) technology to provide private and secure communications. Interference from nearby users are a thing of the past, and one no longer has to worry about others eavesdropping on conversations. "Fishermen can securely relay a new hotspot to their friends without alerting others, and hunters can silently communicate with each other," says Mark Worthey, an avid outdoors enthusiast. "The privacy and security of eXRS is a great improvement over the older FRS/GMRS systems."

TriSquare's flagship TSX300R with Realtree Advantage Timber HD camouflage offers top of the line features and performance that will compliment any outdoor excursion from hiking to hunting and camping to fishing. With 10 billion available channels, interference and jammed reception are no longer a concern. Easy to use **SMS text messaging** with vibrator alert allows for simple and silent communication, while **VOX** mode allows for hands free operation. The built in 10-channel **NOAA weather** receiver will always keep users a step ahead of the weather, and the backlit keypad and dot matrix display are visible at day or night.

The lower cost TSX100R gives users the **eXRS** benefits of secure and interference free communications without the advanced features of the TSX300R. The TSX100R has

1000 channels and is compatible with the TSX300R on those channels. Both radios feature a phone book style contact lists for storing other users' information, as well as extended battery life, call signaling, and VOX operation.

Unlike most other two-way radios, **eXRS** radios are license free and there are absolutely no airtime charges or fees required. With no restrictions, **eXRS** radios may be used by people of any age for personal and business purposes, yet still have the same range capabilities of other high-end UHF hand-held radios that require an expensive license to operate. According to Worthey, "The eXRS system is the pinnacle of two-way radio technology and is perfect for businesses, families with kids or anyone else interested in maintaining private and secure communications. And it's all available with no additional licensing or fees."

TriSquare has been a leader in the design and manufacturing of two-way radios since its inception in 1999. Offices are located in Kansas City, MO and Hong Kong.
